2
BEHAVIOR SETTINGS

A practical illustrated field guide to the NES adaptation. Learn one character, find your tools, then take the route your way.

YOUR FIRST FIVE MINUTES.

Set the rules. Pick a favorite. Learn one special before you race ahead.

01 CHOOSE THE RULES

Title > Options: choose Easy or Hard. Player Shadows controls the extra dark outline and defaults off.

02 PICK A PORTRAIT

Use the D-pad. Select cycles alternates; A or a fresh Start confirms. B returns.

03 LEARN THE EXCEPTION

A usually jumps and B usually attacks. Read the controls for your hero before relying on a button combination.

START PAUSES. SELECT HAS A JOB.

Select changes a portrait at the menu. During play it can switch a weapon, cast a spell or use a special. It does not swap your live character. Some guests choose equipment while paused.

PRACTICE THE HARD PART

Options > Cheats lets you choose a starting stage from 1-1 through 8-4. Up/Down selects an option; Left/Right changes it. The setting applies to the next start.

Invincibility defaults off. It does not save you from a pit or timeout. Reset restores the defaults.

FIND YOUR FAVORITE.

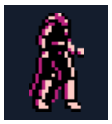

Each character feature is followed by its relevant equipment. Shared arsenals are cross-referenced.

START HERE 2 EASY & HARD 4 SHARED PICKUPS 5

SAME KINGDOM. NEW RULES.

The six original heroes change most. Later guests keep their own systems.

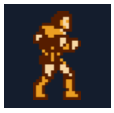

EASY

Classic growth ladders and ordinary stomps on eligible enemies. Extra guests retain their own health, weapons and movement.

HARD

Separate gear for the original guests. Ordinary body landings are dangerous except for the Mario brothers. Attack before contact.

THE CLASSIC POWER LADDERS

	**Mario / Luigi**	Small > Large > Fire
	**Mega Man / Proto Man**	Buster > Charge > Stronger shot
	**Samus**	Short > Long > Wave Beam
	**Bill / Lance**	Normal > Machine Gun > Spread
	**Link**	Basic sword > Stronger > Beams
	**Simon**	Short whip > Morning Star > Flame

A growth pickup advances one tier below the cap. A flower does not skip an unpowered classic hero straight to the final tier.

Spiny enemies, armor and hazards retain their own rules. A sword thrust, pogo or Screw Attack must already be active when it connects.

SHARED PICKUPS

These are the actual native item pictures. A mushroom or flower can mean growth, equipment or health: read your character file. A picture is an identification aid, not a promise that every hero receives every item.

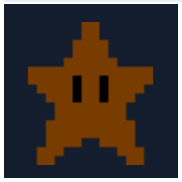

Mushroom

Growth for the classic power ladder. Health-based guests use it for recovery or a custom reward.

Fire Flower

Next classic tier, a separate weapon, a form or recovery. The reward depends on the character and behavior setting.

Super Star

Temporary native invincibility for ground characters. Do not use it as protection from a pit or timeout.

1-UP Mushroom

Adds a life. It does not refill every separate weapon pool.

Small weapon energy

Mega Man / Proto Man / Bass: restore 8 of 112 energy units. Energy Balancer can redirect the refill.

Large weapon energy

Mega Man / Proto Man / Bass: restore 40 of 112 energy units. Also used by block refills.

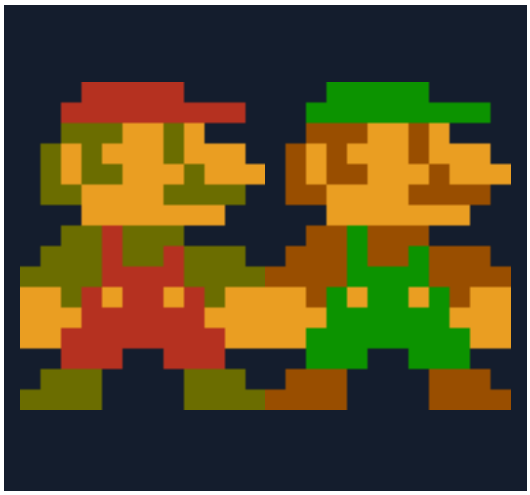

Little Mac: uppercut star

Adds 1 uppercut star, capped at 3. Shown: complete original Punch-Out!! HUD symbol; not SMB invincibility.

MARIO & LUIGI

A familiar jump can take you a long way. Mario mixes momentum, short hops and running leaps. Luigi shares the classic toolkit, with a little extra lift and a little less grip.

TRY THIS FIRST

Start accelerating before the edge. A late takeoff spends more of the jump above the gap.

AT THE CONTROLS

A

Jump; release to shorten the rise.

B + direction

Run. At fire power, B also throws a bouncing fireball.

Down

Crouch in a large form; enter an appropriate pipe.

Select at Mario portrait

Switch Mario and Luigi before starting.

EASY

Mario uses the linked 1.0 movement rules, including a lower walking cap and a jump that responds immediately to release. Ordinary descending stomps remain your basic attack.

HARD

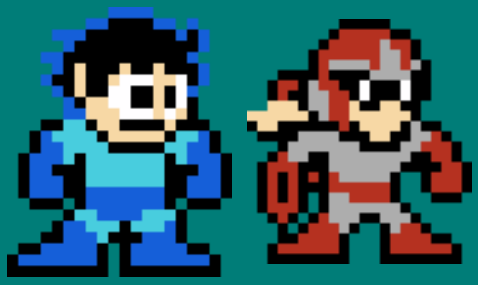

Mario uses the 2.02 movement path: a faster walk, a minimum initial jump rise, and height rules that reward running. He still stomps. Luigi keeps his requested native Mario-style movement in both modes.

POWERUP PLAN

Mushroom: large form. Next growth pickup: fire form. Fireballs bounce along the ground and preserve masonry. Neither brother has a selectable special-weapon inventory.

MEGA MAN & PROTO MAN

Two buster heroes share the same movement and weapon lineup. Highlight Mega Man and press Select for Proto Man. Mega Man starts helmetless; charging arrives with the first growth upgrade.

THE ADVANTAGE

An ordinary buster pellet does not smash a brick in one hit. Fire a second shot at the same masonry.

AT THE CONTROLS

A

Jump; hold for a fuller rise.

Down + A

Slide along the ground, including underwater.

B

Fire. With charging available, hold and release for a charged shot.

Select / pause + Left/Right

Hard: cycle owned weapons / choose either direction.

EASY

The original three-tier route: helmetless buster, helmet and charge, then stronger fire-colored shots. No collectible 2.02 arsenal or energy drops. A classic slide cannot be jump-cancelled in open space.

HARD

The 2.02 movement path adds the walking startup step and allows a jump out of a clear slide. Mushroom grants charging; later blocks reveal individual weapons, including Rush Coil for this shared moveset.

POWERUP PLAN

Easy: buster > charge > stronger fire-colored shots. Hard: charge, eight active tools and Energy Balancer. Proto Man uses the same moves and upgrades.

BUSTER WORKSHOP

Mega Man and Proto Man use this inventory in Hard. Bass uses it in both settings, except Rush. Select cycles owned weapons back to normal. Paused Left/Right moves either way; paused Select returns to the buster. Each weapon has its own energy supply.

Super Arm

Keep 8 energy in reserve. Hold B beside liftable empty masonry; B again throws it and spends 8.

Metal Blade

B plus a direction aims in eight ways. Costs 4.

Hard Knuckle

Launch with B, then steer Up/Down after startup. Costs 8.

Pharaoh Shot

B fires a small shot; hold and release to charge. Costs 4 small /8 charged.

Charge Kick

Select it, then Down+A. The paid sliding attack costs 4.

Flame Blast

B launches a seed that grows into a surface flame. Costs 4.

Water Shield

B summons orbiting balls. A fresh B after formation sends them outward. Costs 16 to summon.

Rush Coil

Mega Man / Proto Man only. B summons; Up+B places him higher. Needs 4 to appear; a spring spends 12.

Energy Balancer

Passive. Routes energy to an eligible owned weapon; no attack or equip command.

Buster upgrade

Mega Man / Proto Man: charge becomes available. Bass: ordinary on-screen shot cap rises from 3 to 4.

Pickup illustrations use the original 2.02 source colors for recognition. Cartridge colors can differ; the corresponding equipment and controls are described above.

BASS

Bass is a gunner with a second chance in midair. His directional buster and dash-jump reward deliberate positioning. A mushroom gives an extra on-screen shot, not a charge attack.

FIELD NOTE

Holding A through a dash is not a new jump press. Re-press it while the grounded dash is still active.

AT THE CONTROLS

A, release, A

Jump, then use one second jump before landing.

Down + A

Dash on the ground. Release A, then press it again during the dash to jump.

Hold B + direction

Automatic buster fire and directional aim.

Select

Cycle acquired weapons, including back to the normal buster.

EASY

Bass was added after the six-character original. He keeps the modern inventory, double jump and dash in Easy. Easy adds ordinary enemy stomps; it does not replace his arsenal with a three-tier buster.

HARD

Keep the same movement and equipment, but ordinary body landings are dangerous. Shoot before contact. A paid Charge Kick is a special attack, not permission to land on every hazard.

POWERUP PLAN

Mushroom raises the buster limit from 3 shots to 4. Seven separately collected weapons and Energy Balancer follow. Bass does not acquire Mega Man's charge shot or Rush Coil.

SAMUS ARAN

Beam range, a compact ball and attack upgrades open different approaches. Easy starts with the classic Morph Ball; Hard makes Morph Ball one of the items you collect.

UPRIGHT

DOWN: MORPH

A exits the ball when there is room. It does not launch a jump.

AT THE CONTROLS

A

Jump. In Morph Ball, A exits the ball rather than jumping.

Down

Easy: Morph Ball. Hard: crouch, then press Down again after acquiring Morph Ball.

B / Up+B

Fire the beam / fire upward. In ball form, B plants a bomb.

Select / Down+Select

Hard: fire a missile / toggle B into missile mode.

EASY

Short Beam becomes Long Beam, then Wave Beam through growth pickups. Morph Ball and bombs are available without an inventory item. Her first two upright suits can head-break bricks; the fully powered form bumps them.

HARD

Mushroom gives Long Beam. Collect Morph Ball, missiles, Ice or Wave Beam, Varia and Screw Attack separately. Her upright head bumps bricks in every Hard suit. Ordinary enemy landings hurt unless a valid special body attack protects her.

POWERUP PLAN

Ice freezes surviving enemies and can make them temporary footholds. Wave changes the beam. Varia protects against firebars. Screw Attack damages eligible enemies during an active spin. Missile stock has a 20 maximum.

SAMUS: GEAR & SUPPLIES

The distinct equipment icons below are Hard-mode items. Easy follows Short Beam > Long Beam > Wave Beam and starts with Morph Ball/bombs.

Long Beam

The first Hard growth upgrade extends the starting beam.

Morph Ball

Down again after crouching transforms. A exits the ball when there is room.

Missiles

Acquire missile ability and stock. Select fires; Down+Select toggles B missile mode. Maximum 20.

Ice Beam

Freezes eligible surviving enemies; they can become temporary footholds.

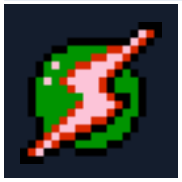

Wave Beam

Changes the beam pattern. Beam equipment replaces the other beam choice.

Varia

Protection against firebars. It is not invincibility against every hazard.

Screw Attack

Attack during the spinning jump. Ordinary standing or non-spinning contact is different.

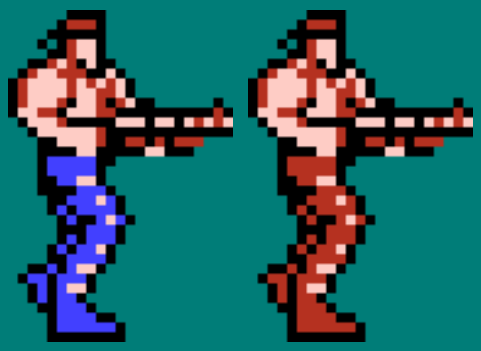

Missile refill

Restores missile stock up to the 20 maximum. Morph Ball B plants bombs without spending missiles.

Pickup illustrations use the original 2.02 source colors for recognition. Cartridge colors can differ; the corresponding equipment and controls are described above.

BILL & LANCE

The Contra brothers turn the Mushroom Kingdom into a firing range. Angle the gun before an enemy closes in, and choose the right rule set before starting: Easy and Hard have very different reward paths.

THE ADVANTAGE

Yes, the mushroom gives it in Easy. In Hard, the matching gun pickup is required.

AT THE CONTROLS

A

Jump with a committed arc.

B + D-pad

Fire horizontally, vertically or diagonally.

Down

Lie low and fire while crouched.

Select at Bill portrait

Choose Lance. A Hard gun pickup equips the replacement gun.

EASY

Normal gun -> mushroom Machine Gun -> flower Spread. Machine Gun is automatic while B is held; spread fires a fan. Powered Bill and Lance can survive an ordinary hit by losing their power. They can stomp eligible enemies.

HARD

Mushroom does not automatically grant Machine Gun. Find Machine Gun, Spread, Laser and Flare as separate pickups, plus two Rapid upgrades. Contact is lethal in every power form. Use weapons instead of ordinary stomps.

POWERUP PLAN

Laser launches a four-segment beam. Flare circles around a moving center. Rapid upgrades increase bullet speed independently of the gun. Hard gun pickups replace each other; they are not a retained Mega Man-style weapon wheel.

KNOW WHAT THE BLOCK GIVES.

Bill and Lance share the same guns. The way you earn them depends on the behavior setting.

EASY: THE THREE-STEP LADDER

NORMAL

>

MACHINE GUN

>

SPREAD

HARD: COLLECT THE GUN ITSELF

MACHINE GUN

Hold B for automatic fire.

SPREAD

A fan of bullets covers more of the lane.

LASER

Four connected segments. A fresh burst replaces the old one.

FLARE

Fire circles around a moving center.

RAPID, THEN RAPID 2

Two speed upgrades, independent of the equipped gun. Both use the winged R. Hard gun pickups replace one another; there is no retained weapon wheel.

Winged-letter illustrations use original 2.02 source colors. Mushroom and flower show the native shared pickups.

LINK

Link works close to the action. His sword, aerial thrusts and returning boomerang turn a cramped ledge into a tactical space. Learn the movement change between modes before judging a jump.

FIELD NOTE

Downward sword contact and an ordinary falling body are different. Get the blade out before the enemy reaches you.

AT THE CONTROLS

A / B

Jump / swing the sword.

Up or Down in the air

Hold a sword thrust in the chosen vertical direction.

Select

Use boomerang in Easy; use the selected special in Hard.

Start, Left/Right, Start

Hard: pause, choose an owned special, resume.

EASY

Three sword tiers, with sword beams at the top tier; the original boomerang is available without an inventory hunt. Link accelerates and carries momentum. Sword contact takes its original priority before ordinary body contact.

HARD

More immediate left/right movement replaces the original acceleration. Mushroom adds the short boomerang; blocks supply bow, bombs, magic boomerang and rings. Ordinary body contact is dangerous, so use a valid sword attack or thrust.

POWERUP PLAN

Bow and bombs each use their own supply, capped at 20. Red Ring improves the powered sword state; Blue Ring protects Link from his own bomb. Select uses the chosen special, while B remains the sword.

LINK: SWORD & SATCHEL

These are original Link items. Zelda II Link has a separate spell/EXP system. Select uses the chosen special; B always keeps the sword.

Sword growth / boomerang

Easy advances the sword tier. Hard mushroom adds the short boomerang.

Top sword tier

Easy reaches sword beams. Hard blocks supply separate equipment instead.

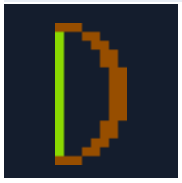

Short / Magic Boomerang

Short is the initial special; Magic upgrades it. Both share the actual returning-boomerang icon.

Bombs

Select spends one bomb. Stock and refills cap at 20. Give your own blast room until Blue Ring is owned.

Bow

Select fires an arrow. Separate arrow stock, maximum 20.

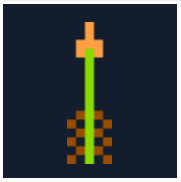

Red Ring

Improves the powered sword state.

Blue Ring

Protection from Link's own bomb blast.

Arrow refill

Restores arrows up to the cap.

Pickup illustrations use the original 2.02 source colors for recognition. Cartridge colors can differ; the corresponding equipment and controls are described above.

ZELDA II LINK.

Three stats, eight spells and two sword thrusts. Select on Link's portrait to choose this separate hero.

ATTACK

Raises primary strength.

MAGIC

Changes spell costs.

LIFE

Reduces incoming damage.

A jumps; B attacks. Hold Up/Down in the air for a learned thrust. Start pauses: Left/Right changes panels, Up/Down chooses; A buys a stat level (1-8). Buying Life/Magic also refills HP/MP.

EASY: ordinary stomps. HARD: attack before body contact. Full health enables sword beams.

THE SPELLBOOK

Choose while paused. Cast with Select.

JUMP	Increases your jump height.	**SHIELD**	Halves ordinary damage while active.
LIFE	Queues health recovery.	**FAIRY**	Flight transformation; allow clearance.
FIRE	Sword attacks launch fire.	**REFLECT**	Shield-area contact can reflect Bowser flames.
SPELL	Turns eligible enemies into Goombas.	**THUNDER**	Screen attack on eligible active enemies.

FOLLOW THE REWARD TRAIL

Blocks teach Jump > Downthrust > Upthrust > Fairy > Shield > Life > Fire > Reflect > Spell > Thunder > Handy Glove, then add capacity. The Glove breaks bricks; HP and MP capacity each cap at 8 containers. Owned or pending unique rewards are skipped.

MAGIC JARS

Restore MP.

HEART CAPACITY

Up to 8 containers.

EXP BAGS

Add experience.

SIMON BELMONT

Simon's first jump looks modest beside a tall pipe. His answer is already built in: release A and jump again in midair. The whip covers space ahead while subweapons work around obstacles.

THE ADVANTAGE

Keep the second jump for the upper half of the obstacle. A fresh press is required; holding A cannot trigger it.

AT THE CONTROLS

A, release, A

Jump, then double jump before landing.

B / Down+B

Whip standing / whip while crouched.

Select or Up+B

Easy: throw an axe. Hard: use the selected subweapon.

Select at Simon portrait

Cycle Simon > Grant > Sypha > Alucard.

EASY

Short whip -> Morning Star -> flame whip. Axes are available without heart management, with more simultaneous axes at higher tiers. Easy also uses the original committed air movement and ordinary stomps.

HARD

Collect whip upgrades and subweapons individually. Axe, dagger, cross and holy water spend one heart; stopwatch spends five. Double Shot and Triple Shot raise the simultaneous subweapon allowance. Ordinary landings are unsafe.

POWERUP PLAN

The stopwatch stops enemy movement for about three seconds of active game updates. Hearts share a 99 maximum. Small and large heart pickups restore 1 and 5. Whip attacks remain available without spending hearts.

SIMON: WHIP & SUBWEAPONS

Easy advances Short Whip > Morning Star > Flame Whip and supplies free axes. Hard uses a heart pool (maximum 99) and separate equipment. Pause + Left/Right chooses; Select or Up+B uses the subweapon.

Morning Star

The first whip upgrade uses the actual mushroom reward. It is not the Triple Shot icon.

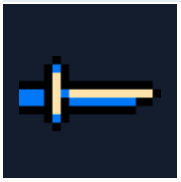

Flame Whip

Further whip upgrade. Whipping itself spends no hearts.

Cross

Returning subweapon; costs 1 heart.

Dagger

Straight forward throw; costs 1 heart.

Holy Water

A ground-level flame tool; costs 1 heart.

Stopwatch

Stops enemy movement for about 3 seconds of game updates; costs 5 hearts.

Axe

Arcing throw; costs 1 heart in Hard. Free in Easy.

Double Shot

Raises the simultaneous subweapon allowance.

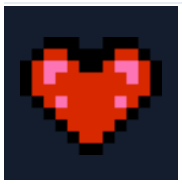

Triple Shot

Further raises the allowance.

Small heart

Restores 1 heart.

Large heart

Restores 5 hearts.

Pickup illustrations use the original 2.02 source colors for recognition. Cartridge colors can differ; the corresponding equipment and controls are described above.

GRANT DANASTY

Quick movement, a close knife and walls that can become routes. Select on Simon's portrait cycles to Grant.

SOURCE ATTACK / REWARD ART

DAGGER AXE STOPWATCH

AT THE CONTROLS

A / B

Jump / close knife.

Toward a wall

Air contact grabs an eligible wall; keep holding toward it. Up/Down climbs.

Up at a ceiling

Attach; Left/Right crawls. A releases or leaps away.

Up+B / clinging B

Use the carried dagger, axe or stopwatch.

EASY

Ordinary enemy stomps are allowed. Wall and weapon systems remain.

HARD

Ordinary landings hurt. Knife, subweapons and climbing remain.

POWERUP PLAN

64 health units; hearts cap 99. Mushrooms heal 16. Flowers rotate dagger > axe > stopwatch and add 5 hearts.

SYPHA BELNADES

A short staff for nearby targets and three distinct spells. Her jump commits to its starting direction.

AT THE CONTROLS

A / B

Jump / staff.

Down+B

Crouching staff attack.

Up+B

Use carried Flame, Ice or Lightning.

Select at Simon portrait

Cycle to Sypha before starting.

EASY

Ordinary stomps are allowed. Spell and health systems remain.

HARD

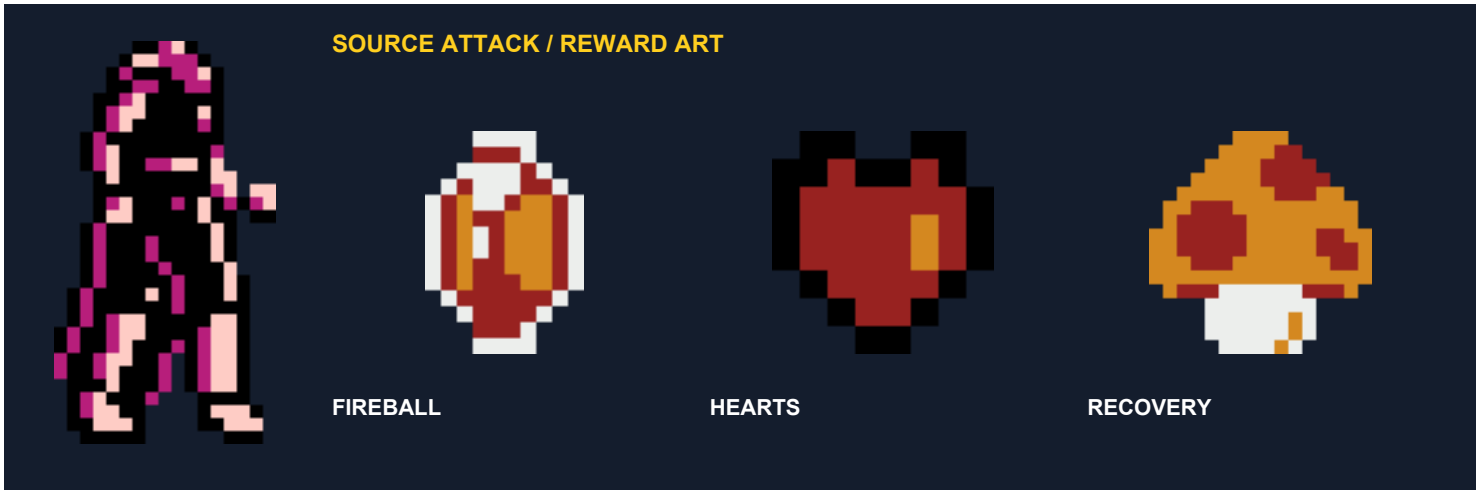

Ordinary body contact hurts. Freeze a valid enemy for a temporary foothold, or attack before landing.

POWERUP PLAN

64 health;99-heart cap. Mushrooms heal 16; flowers cycle Flame > Ice > Lightning and add 5 hearts. Her jump is enlarged for SMB terrain.

ALUCARD

Fireballs and bat flight trade close-range agility for new routes. His ordinary jump also keeps its launch direction.

AT THE CONTROLS

A / B

Jump / free fireball.

Down+B

Crouched fireball.

Down+A

Transform into or out of a bat; allow room to stand.

Bat D-pad

Fly; cannot fire. Entry costs 1 heart, then 1 per 60 game updates.

EASY

Ordinary stomps are allowed outside his special movement.

HARD

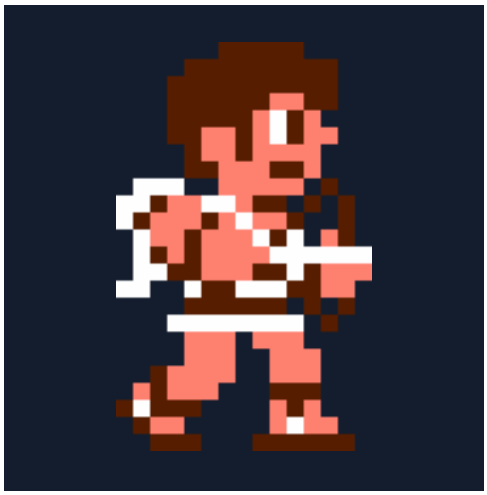

Ordinary body landings hurt. Use fireballs and flight to keep distance.

POWERUP PLAN

64 health;99 hearts maximum. Mushrooms heal 16. Two flower upgrades add upward and downward fireball diagonals; later flowers heal.

PIT

A bow, a hammer and a limited burst of wing flight. Pit is an added guest with his own three-tier progression in both behavior settings.

FIELD NOTE

Jump normally first. A new midair A press starts the wing lift, so use it after gaining height.

AT THE CONTROLS

A / B

Jump / fire an arrow.

Down+B / Up+B

Fire while ducking / fire upward.

Select

Swing the hammer.

At flower power: release, A

Start flight in midair; hold A to spend remaining lift.

EASY

Short arrows -> long arrows -> fire arrows plus flight. Easy allows ordinary stomps. Pit keeps the same requested bow, hammer and flight progression rather than gaining a made-up 1.0 inventory.

HARD

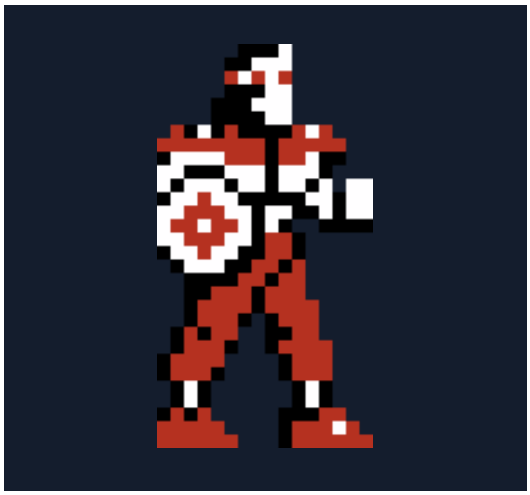

The bow, hammer and flight remain available at the same power tiers. Ordinary body landings become unsafe. Hit enemies with an arrow or hammer, and use flight to avoid an unwanted landing.

POWERUP PLAN

Two arrows can be active. Flower flight supplies up to 60 active updates of lift, roughly one second before slowdown. Releasing A pauses its use; landing restores the budget. Flight cannot activate underwater.

RYGAR

The Diskarmor is a returning weapon with a visible chain. Think in complete throws: its outward sweep, wall turnaround and return are one attack, not a rapid-fire gun.

TRY THIS FIRST

A low throw can reach an enemy while keeping Rygar's body compact.

AT THE CONTROLS

A

Jump.

B / Down+B

Throw standing / throw while crouched.

Wait for the return

Only one Diskarmor throw is active at a time.

Select

No separate Rygar special attack is assigned.

EASY

Mushroom and flower increase Diskarmor reach. Easy adds ordinary stomps. Rygar retains the ROM's native-reference movement and returning-disk mechanics in both behavior settings.

HARD

The same reach progression and attack remain. Ordinary body landings hurt: let the disk clear the lane before you commit to it. There is no invented 2.02 Rygar weapon inventory.

POWERUP PLAN

The three maximum reaches are 40, 64 and 88 NES pixels. The disk retracts toward Rygar and begins returning after wall contact. An enemy is damaged once per throw, so do not count on repeated contact as it comes home.

RYU HAYABUSA

Ryu can turn a vertical wall into a pause in the action. Cling, climb and jump away, then decide whether a sword strike or a paid ninjitsu attack is the safer approach.

THE ADVANTAGE

Before grabbing a wall, choose the side you intend to jump toward.

AT THE CONTROLS

A / B

Jump / slash with the sword.

Jump against a wall

Cling; Up/Down climbs. A jumps away.

Select or Up+B

Use the selected ninjitsu.

Jump Slash selected + air B

Spin the blade during the aerial attack.

EASY

Ryu arrived after the original six. He keeps the modern ninjitsu inventory and wall abilities. Easy adds ordinary stomps; it does not turn his sword and ninjitsu into a classic three-tier substitute.

HARD

Same wall and weapon systems, with dangerous ordinary body contact. Use the sword or a valid Jump Slash instead of relying on a stomp. Wall contact is a movement tool, not invulnerability.

POWERUP PLAN

Shuriken, Fire Wheel, windmill shuriken, Fire Dragon Ball and Jump Slash share ninjitsu. Shuriken costs 3; the others cost 5. Sword extension is separate. The scroll raises maximum ninjitsu from 50 to 99.

RYU: NINJITSU

The ordinary sword is free. Specials share one ninjitsu pool:50 maximum, or 99 with the scroll. Pause + Left/Right chooses an owned attack; Select or Up+B uses it.

Shuriken

Straight throw; costs 3 ninjitsu.

Fire Wheel

Protective rotating fire attack; costs 5.

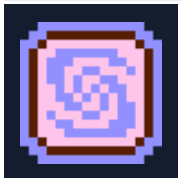

Windmill Shuriken

Returning spinning weapon; costs 5.

Fire Dragon Ball

Flame attack; costs 5.

Jump Slash

With it selected, press B in the air for the spinning blade; costs 5.

Sword Extension

Improves the ordinary sword. It is separate from ninjitsu selection.

Ninjitsu Scroll

Raises maximum ninjitsu to 99.

Small refill

Restores 5 ninjitsu.

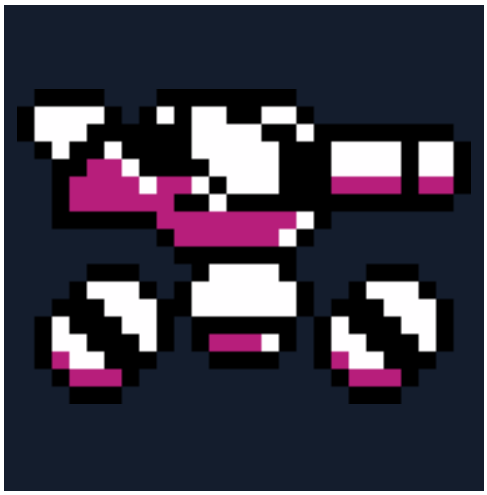

Large refill

Restores 10 ninjitsu.

Pickup illustrations use the original 2.02 source colors for recognition. Cartridge colors can differ; the corresponding equipment and controls are described above.

SOPHIA III

Sophia starts as a mobile cannon and becomes a route machine. Hover, wall climbing and ceiling travel are separate equipment discoveries, so never assume a fresh tank can do all three.

FIELD NOTE

Select launches missiles; it does not replace B with a missile gun.

AT THE CONTROLS

A / B

Jump / fire the main cannon. Up+B fires upward.

Select

Fire the selected standard or homing missile.

Hover owned: new air A

Start hover; hold A while fuel remains.

Wall / ceiling upgrades

Up attaches at a valid surface. Aim away to fire; A releases the ceiling.

EASY

Sophia retains the later inventory and movement upgrades. Easy permits ordinary descending stomps. Mushroom strengthens her main cannon; further block items expand her route options.

HARD

The same equipment remains, but ordinary body landings hurt. Use cannon fire, missiles and acquired movement abilities to set up a clean landing. Armor is not blanket contact protection.

POWERUP PLAN

Standard missiles launch a triplet and spend 3 from a 60-stock pool. Homing spends 1 from a 20-stock pool. Hover has an 8-unit supply and regenerates when inactive. Crusher further upgrades the cannon; wall and ceiling abilities are separate.

SOPHIA: BUILD ROUTE

Sophia keeps her equipment in both modes. B stays the main cannon. Pause + Left/Right chooses the missile type; Select fires it. Separate stocks are shown in the HUD.

Hyper cannon

The first growth upgrade strengthens the main cannon.

Standard Missiles

Select launches a triplet for 3 stock. This picture also marks refills; maximum 60.

Homing Missiles

Select fires one for 1 stock. This picture also marks homing refills; separate maximum 20.

Hover

A fresh A in the air starts it; hold to sustain while fuel lasts. Eight-unit reserve regenerates when inactive.

Crusher

Further main-cannon upgrade.

Wall Climbing

Up attaches at an eligible wall. This is separate from ceiling travel.

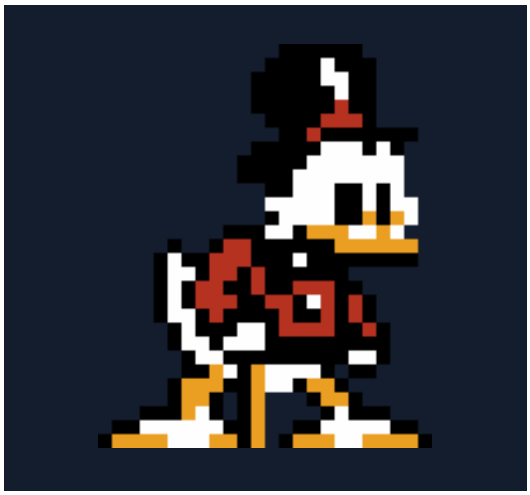

Ceiling Travel

Up attaches at an eligible ceiling after the required upgrade. A releases.

Pickup illustrations use the original 2.02 source colors for recognition. Cartridge colors can differ; the corresponding equipment and controls are described above.

SCROOGE McDUCK

Scrooge brings a cane and a pogo technique from DuckTales. This is a focused ROM addition: master the contact at the end of the cane instead of expecting DuckTales' entire treasure and health system.

TRY THIS FIRST

Press Down+B while airborne, with enough height left to establish the attack.

AT THE CONTROLS

A

Jump.

B

Swing the cane.

Down+B in the air

Engage pogo. Keep the input held to continue bouncing after landings.

Select at Scrooge portrait

Switch to Darkwing Duck; his moveset is separate.

EASY

Ordinary descending enemy stomps are permitted, alongside the cane and pogo attacks. Scrooge retains his custom ROM toolkit in both modes rather than gaining a fictional 1.0 incarnation.

HARD

Ordinary body landings hurt. Engage pogo early enough for the cane attack to reach the target. A cane hit and a body overlap are different contacts; do not treat every falling pose as protected.

POWERUP PLAN

Mushroom and flower advance the normal power state. Cane and pogo are available from the start; neither pickup adds a separate weapon inventory or the original DuckTales treasure/health system.

DARKWING DUCK

Scrooge's alternate brings a gas gun, cape guard and ledge hanging. Select on Scrooge's portrait to switch.

THE ADVANTAGE

Arrow Gas can form a temporary foothold on an eligible wall. Check the landing before spending the next shot.

AT THE CONTROLS

A / B

Jump / fire gas gun.

Up on the ground

Raise the cape guard.

Jump to an edge

Hang where admitted; Up climbs, Down drops, A jumps away.

Select

Toggle normal gas / the currently owned adaptor.

EASY

Ordinary stomps are allowed.
Four-health-point and gas systems remain.

HARD

Ordinary body landings hurt. Use the cape or gun when their contact rules apply.

POWERUP PLAN

Arrow, Heavy or Thunder adaptor; one at a time. Arrow costs 3 gas; Heavy/Thunder 2. Enemy supplies restore gas/health; maximum 99 gas.

DARKWING: GAS, GEAR & RECOVERY

Adaptor pickups replace the carried adaptor. Select changes between the normal gas gun and the owned adaptor. B fires; the normal gas shot is free.

Small health

Restores 1 health point, capped at 4.

Full health

Restores all 4 health points. Some blocks become recovery while health is low.

Large gas

Restores 10 special gas, up to 99.

Small gas

Restores 1 special gas.

Arrow Gas

Fires a platform-forming arrow; costs 3 gas.

Heavy Gas

Ground-spreading shot; costs 2 gas.

Thunder Gas

Multi-direction electric shot; costs 2 gas.

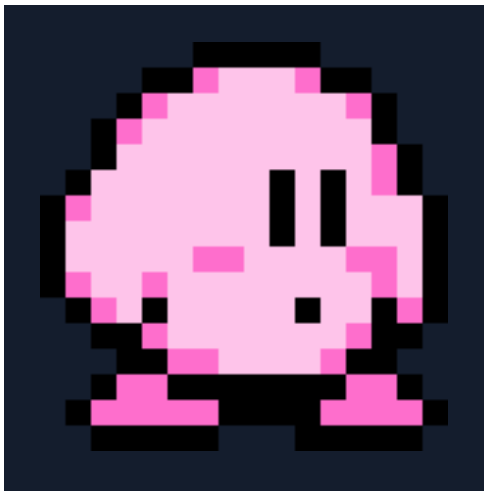

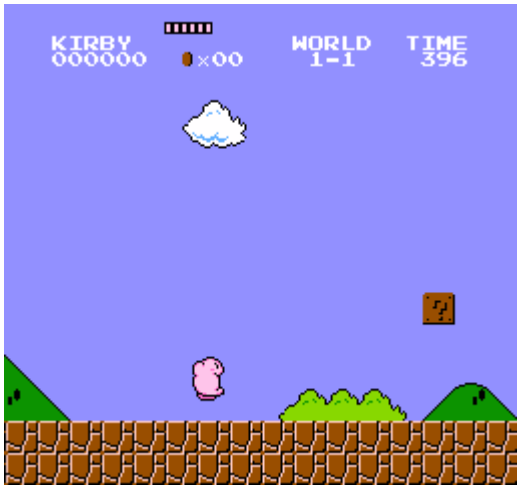

Super Star

Uses the native SMB temporary-invincibility rule; not a new adaptor.

KIRBY

Inhale, swallow and borrow an enemy's trick. Mushroom and flower are food; Kirby has six health points rather than Mario growth.

FIELD NOTE

Spitting and swallowing are a choice. A star clears a lane now; a useful copy can solve the next obstacle.

AT THE CONTROLS

A / Up

Jump; a new air press starts floating. Hold to rise.

B with an empty mouth

Hold to inhale eligible enemies.

Down / B with a full mouth

Swallow for the copy power / spit the enemy as a star.

B with a power / Select

Use the copied ability / discard it.

EASY

Ordinary stomps are allowed. The six-point health and copy systems remain.

HARD

Ordinary contact costs health; use inhale, copy attacks or avoidance.

POWERUP PLAN

Mushroom and flower restore 2 HP. Fourteen SMB enemy families provide distinct copy attacks; see the enemy field guide.

A KINGDOM OF NEW TRICKS.

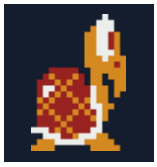

Inhale with B. Swallow with Down. B uses your new power; Select lets it go.

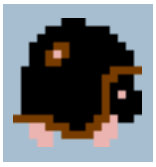

GOOMBA
CHARGE
A grounded forward body charge.

GREEN KOOPA
SHELL
Fires a green shell-type projectile.

RED KOOPA
SHELL
Fires the red shell-type variant.

BUZZY BEETLE
GUARD
Hold B on the ground to guard; it does not protect from every hazard.

HAMMER BRO
HAMMER
An arcing hammer projectile.

BLOOBER
JET
An upward attack projectile.

GREY CHEEP
BUBBLE
A slower horizontal bubble.

RED CHEEP
SHOT
A faster fish-family shot.

PARATROOPA
HIGH JUMP
B launches the rising body attack.

LAKITU
CLOUD
Hold B to suspend vertical fall during the active ability.

SPINY
NEEDLES
Fires a three-needle fan.

PIRANHA PLANT
BITE
A close body/contact attack.

PODOBOO
FIRE
Rapid fire-family projectile.

BULLET BILL
DASH
A forward aerial body dash.

Enemy portraits show native world poses and colors. These are copy targets, not collectible items. Swallow to keep a power; spit with B for an immediate star attack instead.

META KNIGHT

Kirby's Select alternate replaces copy powers with a sword chain and sustained flight. His playable controls are an adaptation of an original NES boss.

B: SLASH

HOLD B: CHAIN

A / UP: FLIGHT

AT THE CONTROLS

A / Up

Jump; press again in the air or use Up to start flight. Hold to rise.

Down

Crouch on land; cancel flight in the air.

B

Sword. Held B chains slash, thrust and slash.

Select on Kirby

Switch Kirby / Meta Knight before starting.

EASY

Ordinary stomps are allowed. Sword and six-point health remain.

HARD

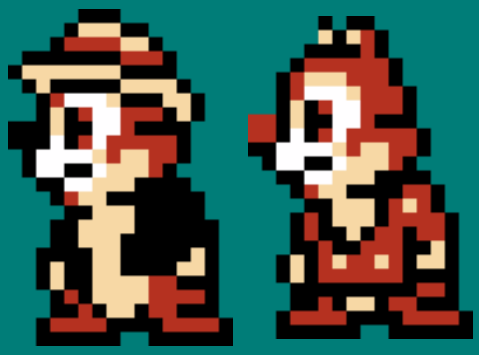

Ordinary body landings cost health. Use the sword to meet the enemy first.

POWERUP PLAN

Mushroom and flower restore 2 of 6 HP; they do not add copy abilities. The sword can break eligible bricks and activate question blocks.

CHIP & DALE

The Rescue Rangers turn crates into weapons and cover. Select changes Chip to Dale on their portrait; controls and health match.

THE ADVANTAGE

You can lift breakable empty masonry, not pipes, question blocks or the foundation. Losing a crate means finding another.

AT THE CONTROLS

A

Jump; release shortens the rise.

B nearby

Pick up a crate or an eligible loose brick. B again throws it.

Up+B while carrying

Throw upward.

Down while carrying

Hide in the crate. An eligible ordinary enemy can break it instead of hurting you.

EASY

Ordinary stomps are allowed alongside crates.

HARD

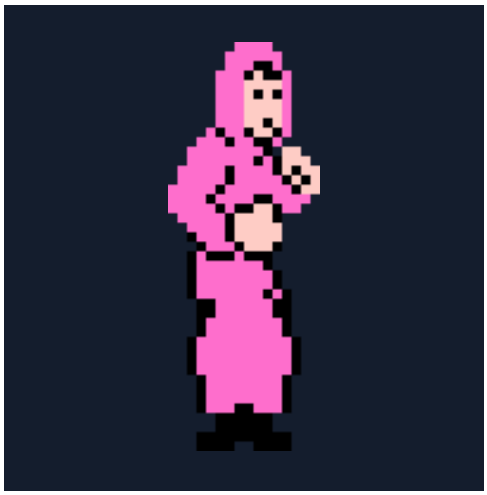

Ordinary body contact hurts. Carry a crate before closing the distance.

POWERUP PLAN

Three health points. Mushroom heals 1; flower restores all 3. A visible entrance crate starts each area. These pickups do not grant new weapon tiers.

LITTLE MAC

Run the kingdom in the training tracksuit. This side-view boxing adaptation uses hearts for fighting spirit and stars for uppercuts.

FIELD NOTE

Save a star for an armored target. Normal punches cannot defeat a Buzzy Beetle; the uppercut can.

AT THE CONTROLS

A / Down

Jump / duck.

B

Punch; Down+B attacks low.

Up+B

Spend 1 star for an uppercut.

No hearts: duck

Duck for 30 game updates to recover 20 hearts.

EASY

Ordinary stomps are allowed. Boxing health, spirit and star rules remain.

HARD

Ordinary landings hurt. Time a punch or super before contact.

POWERUP PLAN

96 HP,20 starting hearts. A missed punch costs 1 heart; a hit refunds it. Mushrooms heal 24. Flowers become visible stars; carry at most 3.

HEARTS MAKE THE HERO.

A returning primary, ten stocked specials and a health meter that changes what you can throw.

THE PRIMARY LADDER

A: JUMP B: ATTACK

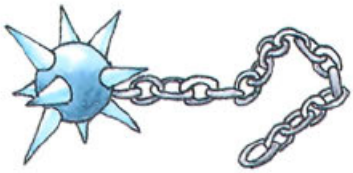

Select cycles stocked specials, then returns to the unlimited primary. Watch the weapon name and your filled hearts.

Easy allows ordinary stomps. Hard makes body contact dangerous. Hearts and weapon stocks work in both modes.

ISLAND YO-YO

Your unlimited starting primary.

SHOOTING STAR

Own the upgrade and keep 6 hearts filled.

SUPER NOVA

Own the upgrade and keep 11 hearts filled.

BIG HEART

Adds capacity and refills health; maximum 22.

SMALL HEART

Restores one filled heart.

STAR

Every five collected restore one filled heart.

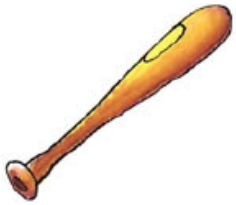

Special stock clears at life loss or a new level; ordinary pipe areas preserve it. Capacity and owned primary upgrades persist. When health falls below a threshold, the primary falls back.

Nintendo manual illustrations, including Super Nova; not installed pickup screenshots.

PACK A BETTER PUNCH.

Ten specials. Choose with Select; attack with B. Learn the silhouette, then watch your stock.

01

BASEBALL BAT

A close swing. Step into range before you spend a shot.

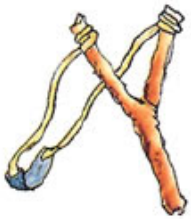

02

FIRE

A forward flame attack. Give it a clear lane.

03

SLINGSHOT

A compact ranged shot for enemies ahead.

04

BOLA

A spinning thrown weapon. Keep room while it travels.

05

MIRACLE MIRROR

A contacting Bill or Bowser flame can become a reflected laser.

06

ASTERISK

Throw with B. A fresh second B splits the flying blades.

07

SPIKES

A bounded screen attack against eligible enemies.

08

BASEBALL

A thrown ball. Its stock is separate from the slingshot.

SUPER LASER

One forward beam.

MEGA LASER

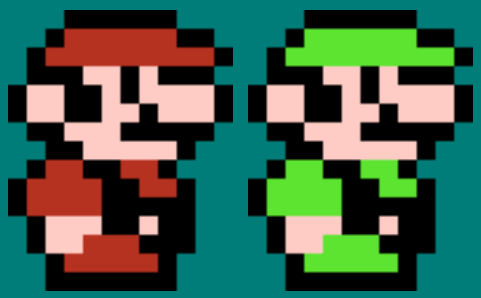

Two separated beams.

ATTACK PATH DIAGRAMS

Weapon illustrations: original StarTropics manual. They identify the tools, not distinct block-pickup icons. Laser paths are diagrams; small sprites are the installed projectiles.

SMB 3 MARIO & LUIGI

A second Mario slot with the original SMB 3 movement and form repertoire. Select changes the brother; these are separate from the original Mario/Luigi slot.

THE ADVANTAGE

The P meter rewards a runway. Charge it before a gap, and keep enough space to start the jump at speed.

AT THE CONTROLS

A / B

Jump / run. At fire or hammer power, a fresh B throws.

Raccoon / Tanooki B

Tail attack. Repeated A slows descent.

Full P, jump, repeated A

Launch from a run and flap to fly.

Tanooki Down+B

Become a statue; release Down to return.

EASY

Both brothers retain SMB 3 forms and ordinary enemy stomps.

HARD

Both retain their forms and ordinary stomps; this slot does not become a gunner-style no-stomp character.

POWERUP PLAN

Mushroom grows; later blocks randomly provide Fire, Leaf, Frog, Tanooki or Hammer. Higher suit damage drops to Super, then small.

SMB 3: PICK YOUR FORM

A small character receives a mushroom. Once powered, a flower-class block can randomly give any of the five normal forms below. Repeats are possible. This block roulette is specific to the adaptation.

Super Mushroom

Small > Super. B runs; A jumps.

Fire Flower

B throws fireballs. Normal fireballs preserve masonry.

Super Leaf

Raccoon form: B tail attack; repeated A slows descent. Full P plus a running jump starts flight.

Frog Suit

Land hops and dedicated underwater movement.

Tanooki Suit

Raccoon moves plus Down+B statue. Release Down to return.

Hammer Suit

B throws hammers with inherited movement. Hammers pass through terrain.

THE RACCOON / TANOOKI FLIGHT DRILL

1 RUN

Build the P meter on a clear runway.

2 JUMP

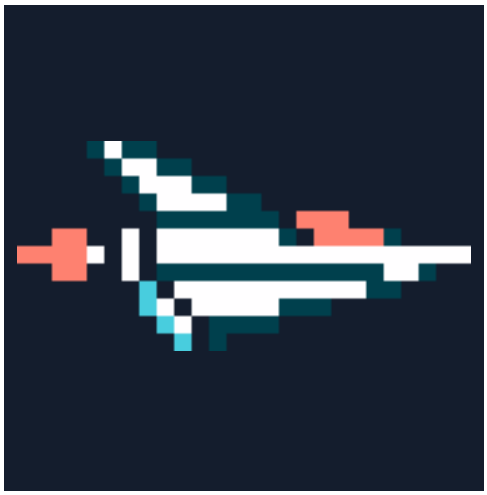

Take off with full P and room ahead.

3 FLAP

Press A repeatedly to fly; plan the landing.

VIC VIPER

A scrolling shooter inside the Mushroom Kingdom. The camera advances automatically during ordinary flight until the level's end lock.

FIELD NOTE

An Option follows your recent path. Move around an obstacle before firing so it gains a useful angle.

AT THE CONTROLS

D-pad

Fly in four directions.

A

Fire the main gun, missiles and equipped Options.

B

Buy the highlighted power-bar cell.

Capsules

Physical contact advances the bar. Choose when to buy instead of spending immediately.

EASY

Flight and shield rules remain; there is no ordinary foot stomp.

HARD

The same ship rules remain. Solid terrain is fatal even with a shield.

POWERUP PLAN

Speed Up, Missile, Double, Laser, up to 2 Options and Shield. Double and Laser replace each other. Shield absorbs 5 enemy contacts; the sixth is fatal.

BUY THE ROUTE YOU NEED.

Touch a capsule to advance the cursor. Press B to buy the selected cell.

The capsule is the physical pickup. Equipment is selected on the bar. Buy only the speed you can control.

SPEED	MISSILE	DOUBLE	LASER	OPTION	SHIELD

POWER BAR: READING DIAGRAM

DOUBLE

Forward and diagonal fire; replaces Laser.

LASER

A focused forward primary; replaces Double.

OPTION

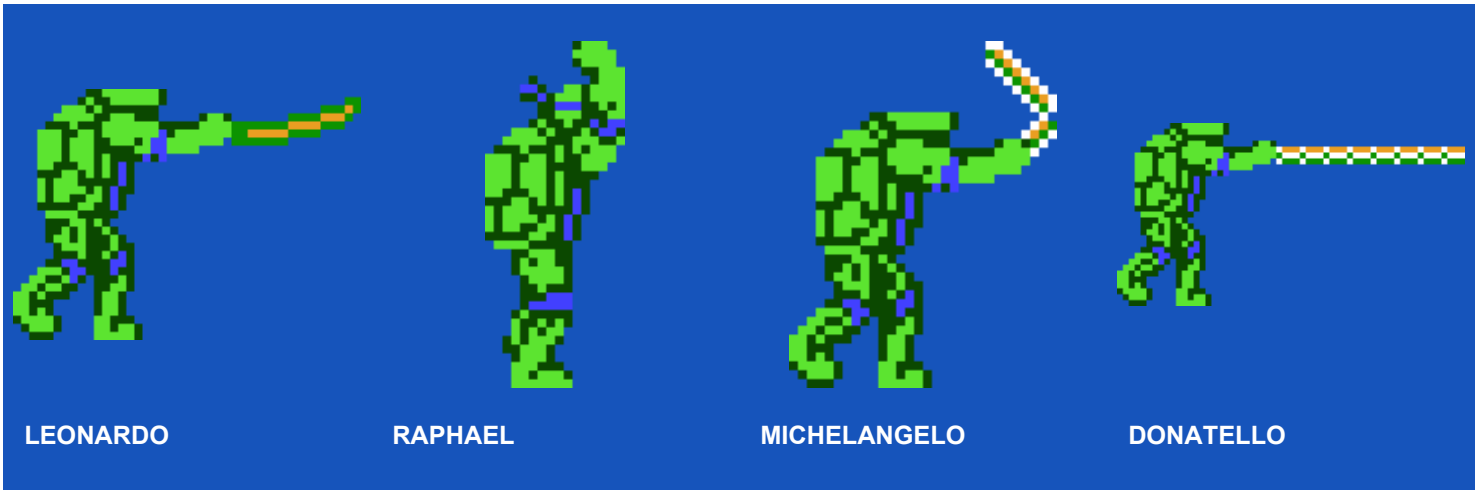

Up to two followers repeat your fire.

Attack / follower diagrams use the native ship sprite. Paths and rings explain the equipment; they are not pickup artwork.

MISSILE: floor-crawling support. SHIELD: absorbs five enemy contacts; solid terrain still kills. The Parodius previews use a related bar with their own guns and an extra reset cell.

TEENAGE MUTANT NINJA TURTLES

Leonardo: katanas. Raphael: sai. Michelangelo: nunchaku. Donatello: bo. The four original NES fighters share a slot; Select cycles the brothers before starting.

AT THE CONTROLS

A

Jump; hold for the native variable rise.

B

Use the selected turtle's weapon.

Up+B / Down+B

Attack high / low; Down also crouches on land.

Select on portrait

Leonardo > Raphael > Michelangelo > Donatello.

EASY

Ordinary stomps are allowed. Melee attacks and native turtle health remain.

HARD

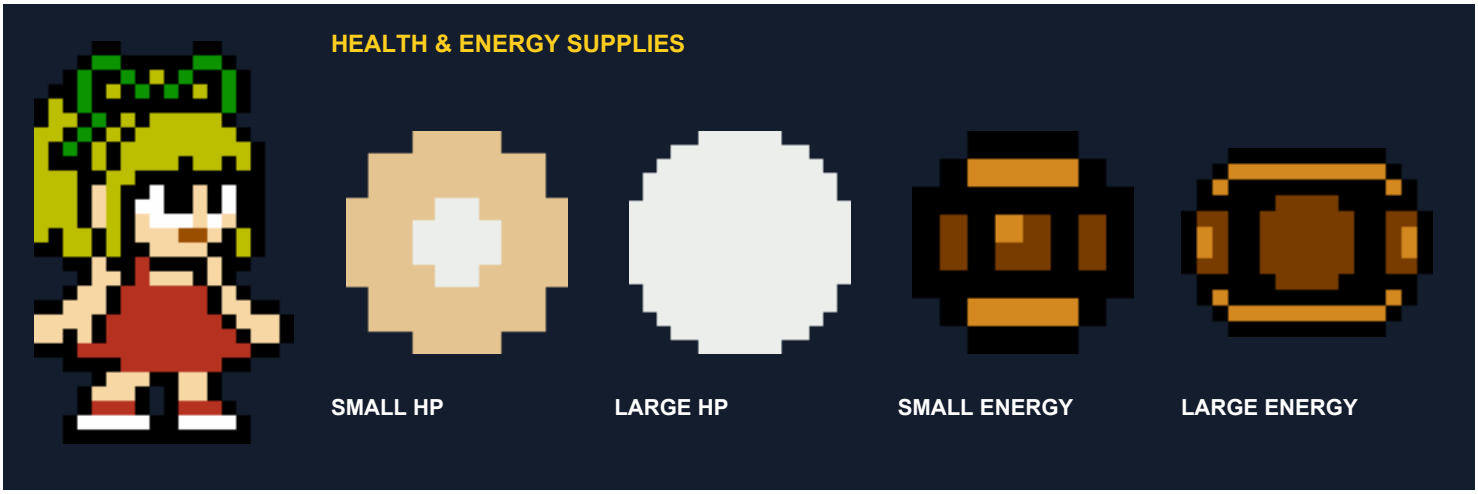

Ordinary body landings hurt. Use the weapon's reach and direction.

POWERUP PLAN

Each turtle has 128 health units. Mushroom restores 32 and flower 64. The four primary weapons differ in reach, speed and power; there is no implemented enemy-drop subweapon inventory.

ROLL

A separate mobile-inspired buster guest. Highlight Bass and press Select. Roll has her own health and energy instead of Bass's weapon wheel.

AT THE CONTROLS

A

Jump; release for a shorter rise.

B

Fire up to 3 ordinary shots.

Hold B

Automatically charge/fire after 60 game updates; costs 4 energy.

Select in play

No Bass weapon cycling, dash or double jump.

EASY

Ordinary stomps are allowed. Movement uses the installed Mega Man Easy profile.

HARD

Use the buster or avoid body contact. Movement uses the installed Mega Man Hard profile.

POWERUP PLAN

28 HP /28 energy. Mushroom and flower refill both; physical enemy capsules restore 2 or 10. Charge, damage scaling and recovery are adaptation rules.

THE PARODIUS PILOTS

Three playful Vic Viper alternates. Select on the ship portrait cycles Vic Viper > Octopus > TwinBee > Pentarou.

AT THE CONTROLS

D-pad / A

Fly / fire the owned ensemble.

B

Buy the highlighted power-bar cell.

Capsules

Advance the 7-cell power bar; spending is a separate B press.

Bells

Shoot to change the color, then physically collect the reward.

EASY

These remain aircraft-style guests, with shield/terrain rules rather than foot stomps.

HARD

Same native equipment and Bell systems. Contact still requires the ship's defense rules.

POWERUP PLAN

Octopus uses Tailgun / Ripple; TwinBee uses Tailgun /3-Way; Pentarou uses Double / Spread. Each has its own missile/Option art, speed limits and shield.

PARODIUS: CHASE BELL

Private development preview. Shoot a Bell to change it, then collect it. A Gold Bell needs four hits to change; special colors need one.

Gold Bell

Shot repeatedly to change it. Score streak:500,1000,2500,5000,10000.

Blue Bell

Super Bomb clears eligible enemies and flashes the screen.

Red Bell

Three powerful crest shots.

White Bell

Awards a life.

Flashing / Big Bell

Temporary giant invincibility; cannot fire while Big. The flashing phase is shown.

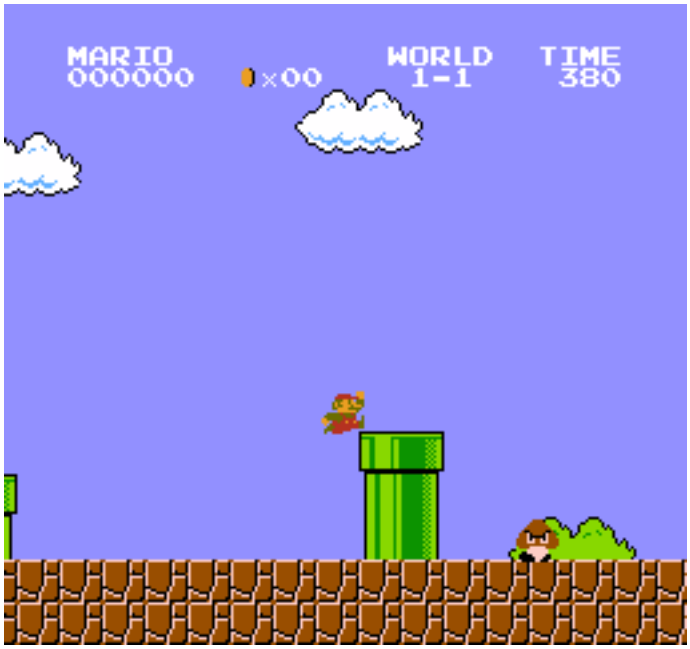

THREE DISTINCT LOADOUTS

OCTOPUS	2-Way missiles; Tailgun / Ripple; up to 4 Options; O-Trap.
TWINBEE	Returning Rocket Punch; Tailgun / 3-Way; up to 3 Options; Force Field.
PENTAROU	Piercing Potion; Double / Spread; up to 3 Options; Bubble shield.

Four source speed levels. The sixth bar cell, RST, removes upgrades; the final cell buys defense. White Bell uses the original manual illustration; other Bell images are cartridge captures.

THE ROUTE IS YOUR TOOL.

Read the ground before you spend the extra jump, flight or weapon stock.

PIPES: SAVE A MOVE

Simon and Bass need a fresh second A. Sypha and Alucard commit to their launch direction. Line up before the jump.

GAPS: FIND A RUNWAY

Mario and the SMB 3 brothers need room to build speed. Pit spends limited flight; landing restores it. Ships keep scrolling.

BLOCKS: LET THE REWARD RISE

Many Hard rewards are separate physical items. Let them rise before collecting. A buster pellet may need two hits on a brick. Pipes, spent blocks and the foundation are not ordinary breakable masonry.

Practice one character and one behavior setting at a time. Change the method before you change the hero.

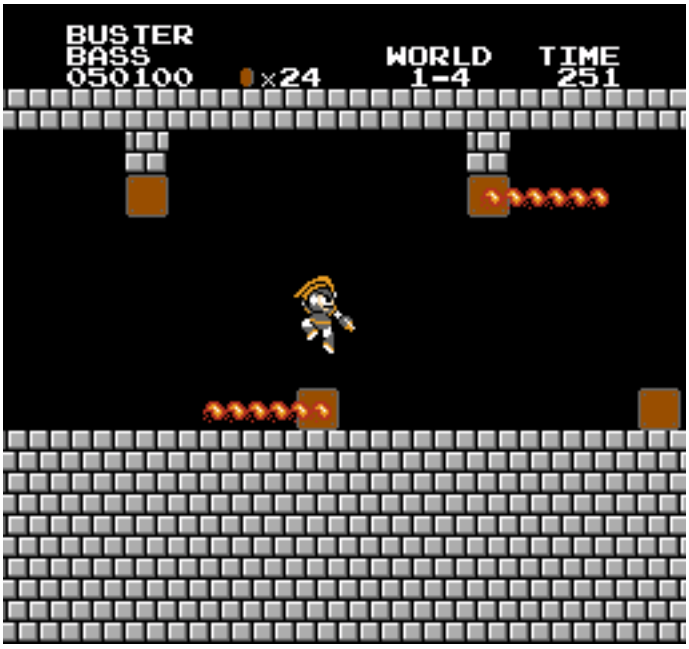

A DIFFERENT KIND OF JUMP.

The best land habit can be the wrong underwater habit.

KEEP THE SWIM RHYTHM

Most ground heroes use repeated A strokes in water. Samus has her ball tools; Frog form and ships have their own directional movement. Pit's flower flight is disabled underwater.

CONTACT HAS CONDITIONS

Varia covers firebars. A valid sword thrust, pogo or spin attack protects only within its own rules. An ordinary falling body is not the same move.

KEEP A RESERVE FOR THE RETURN

Do not spend every heart, missile or energy unit crossing the first obstacle. Alucard pays for bat flight; the buster guests have separate weapon pools; Mike's strong primary depends on filled hearts. Read the meter before choosing the route.

KNOW YOUR EDITION.

This guide covers the published roster and clearly marked private previews.

33 PUBLISHED IDENTITIES

The published full-roster MMC 3 and MMC 5 editions contain 33 identities, including Meta Knight. Smaller original-roster cartridges contain 14. An alternate is selected from its portrait before play.

FOUR PRIVATE PREVIEWS

Roll and the three Parodius pilots require the private development MMC 5 build. Native Parodius death art is present. Lag/dropout, dedicated audio, full-campaign validation and final all-item coverage remain open.

ABOUT THE PICTURES

Enemy portraits use native world poses and palettes. Mike's marked illustrations come from Nintendo's StarTropics manuals; laser paths are diagrams. Other item pictures use original 2.02 source colors or installed art, as captioned. Exact origins and image hashes are in the editable pack.

A FIELD GUIDE, STILL IN DEVELOPMENT

Planned abilities are not presented as complete. Mike's original utility magic and a turtle enemy-drop subweapon inventory are not implemented. This guide does not certify a complete campaign or source-game-perfect physics and audio.

Unofficial fan guide inspired by classic game magazines. Characters and source artwork belong to their creators. Source reference: immutable NR private checkpoint; earlier field captures retain their recorded origins.
